White collar professionals in hazardous environments

Including surveyors and professional engineers who perform work at remote or hazardous locations such as offshore oil rigs or underground, and who may require contractually compliant cover.

Consulting Services

We have partnered with a specialist consulting firm that can assist our Insureds over a range of risk management areas, including reviews and assistance with supply chain management, tendering, business streamlining and direct risk management process consulting, among many others. These services are not traditional insurance risk engineering consulting, but independent advice and review of whole-of-business processes and their exposures. We can propose a customised offering at subsidised pricing for any of our Insureds.

Our Team

Our senior underwriting team covers both coasts of Australia, ensuring availability across all time zones and locations nationally.

Importantly, our underwriters are shareholders in the business, and are not only responsible for delivering on our promises, but accountable.
